

Digital Solutions bus stops are energy independent city devices providing informative and multimedia functionalities for citizens, as well as protecting from external urban factors.

Thanks to a special driver for energy management and cloud communication, the bus shelter is able to work in field whole year, regardless of sun reaching it. Integrated mobile chargers, smart LED lights, speakers, e-paper screens and smart hot-spots allow real-time communication with passengers and improvement of the efficiency of municipal services.

www.digital-solutions.gr

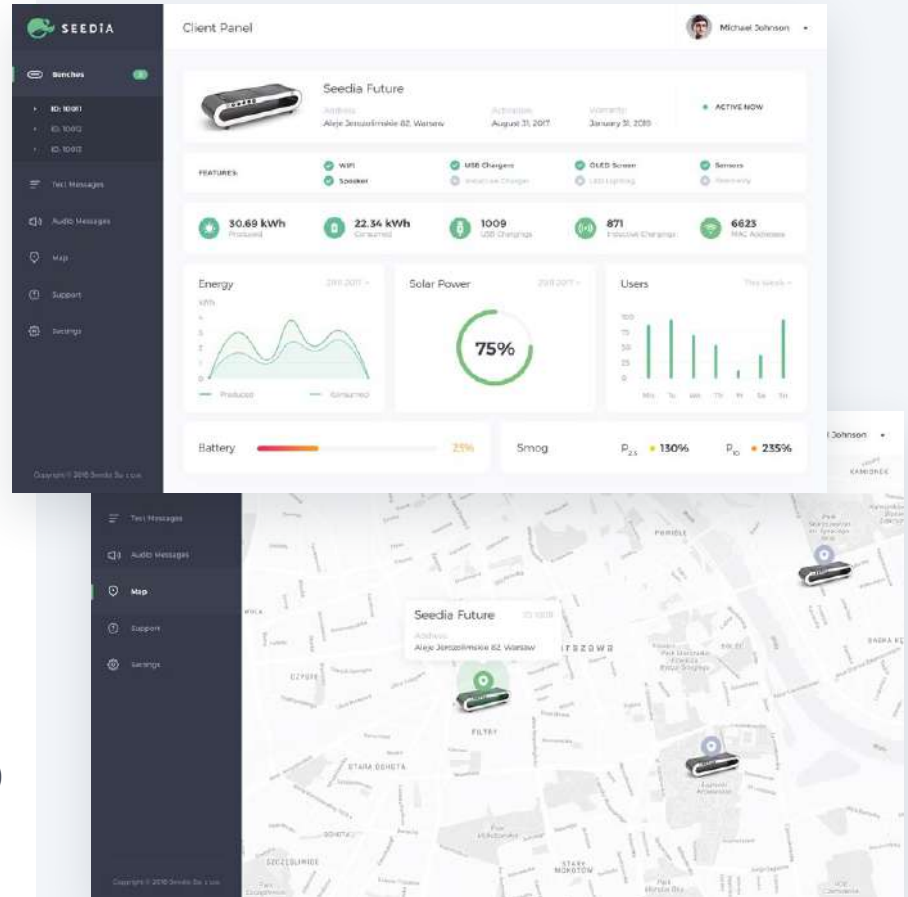

Each product of **Digital Solutions** brand sends data to specially designed web dashboard. Thanks to the obtained information, we are able to provide predictive maintenance for customers by remote supervision of every device.

By logging to the dashboard, the customer has a preview of the condition of the product in real time and possibility to manage multimedia functions of the device:

- mp3 player (remote creation of an audio library)
- e-paper screen (management of presented content)
- sensors (preview of data from sensors in real time)

Captive Portal

Our captive portal allows you gather all the data you need in order to properly communicate with your customers and personalize their experience.

Splash Page

Display any sort of content to your visitors, allowing them to easily learn more about your business, latest events or promotions and offers.

Reviews

Ask your customers for reviews, receive ratings and comments and communicate with your visitors.

Analytics

Analytics are a crucial component of Social WiFi. Getting to know who your customers are and how to best approach them is vital to any line of business.
